Coding Exercise

React
Redux
SCSS
API call

Complete the following task.

Use **Create-React-App** to build a weather app, displaying the current weather conditions of Australia's major capital cities.

Notes:

- Display the name of the city, current temperature and conditions, in a user-friendly UI.
- Weather data can be retrieved from: https://openweathermap.org/current

When creating this project use the techniques you think is best suited and keep in mind:
- Best coding practices
- Scalability
- Reliability
- Reusability
- Responsive
- Performance

Deliverables:

1. Source code and readme following best practices.
2. Ensure that the readme follows best practises and includes things such as how to run the code, deployment options etc.
